

Re-naming Cluster Partitions

Whenever we form clusters in Tableau 10, a cluster legend is automatically created whose partitions are named by default as CLUSTER1, CLUSTER2 and so on (shown in figure below). Now the user may want to rename these partitions based on the requirement and the way the clusters are formed.

To achieve this:

1. Drag the Cluster in marks card to the Dimension shelf in Data Pane.
2. Automatically a group is formed.
3. Right Click on the group -> Edit.
4. Provide the desired names to the clusters and click OK.
