

### Conditional formatting in Tooltip

Tableau does not allow to do conditional formatting on Tooltips. In this tip we will discuss how to introduce a workaround to format our tooltips using Calculated Fields defining our conditions.

Here, we are reporting Category wise sales in the Superstore dataset. While hovering on any of the bars for each category, the tooltip will give separate color for respective category name.

#### Steps to do such conditional formatting :

1. Write calculated field for each category.

```
Technology
IIF ([Category]="Technology", "Technology", "")
```

2. Put these calculated fields in Detail Shelf.
3. Now, edit the Tooltip as shown below
