

This Visualization helps in comparing the change in form of a bar and dots.

Here, the visualization compares the change in amount of profit across different product name. Hovering upon the dots will provide with the detail description of the analysis.

### LOLLIPOP CHART

Lollipop Chart is also known as malformed bar graph in Tableau. It is effectively used to illustrate the change in data. It is a dual axis chart with one marks type to be a shape and the other marks types to be in a line.

Learn how to make a Lollipop Chart in Tableau:
