

RANSOMWARE ANALYSIS

The Visualization, depicts the Region along with the Countries affected through Ransomware attack all over the world.

Here, on selecting a particular Region, analysis can be further narrowed down to the number of the Organization that have been affected on a particular Region along with individual Country.

CHOROPLETH MAPS

Also known as filled maps in Tableau, Choropleth maps are great for showing ratio data or aggregated data for polygons. These polygons can be counties, regions, states, or any area or region that can be geocoded in Tableau. They can even be custom territories created in Tableau.

VERTICAL BAR CHART.

Vertical bar chart visualizes the relationship and comparison between various elements. Typically, they are better used with multiple dimensions to show the comparison for making quick work of information consumption for the report viewer. They can immediately see comparative relationships as well as approximate numeric values.
