

NODE LINK ANALYSIS

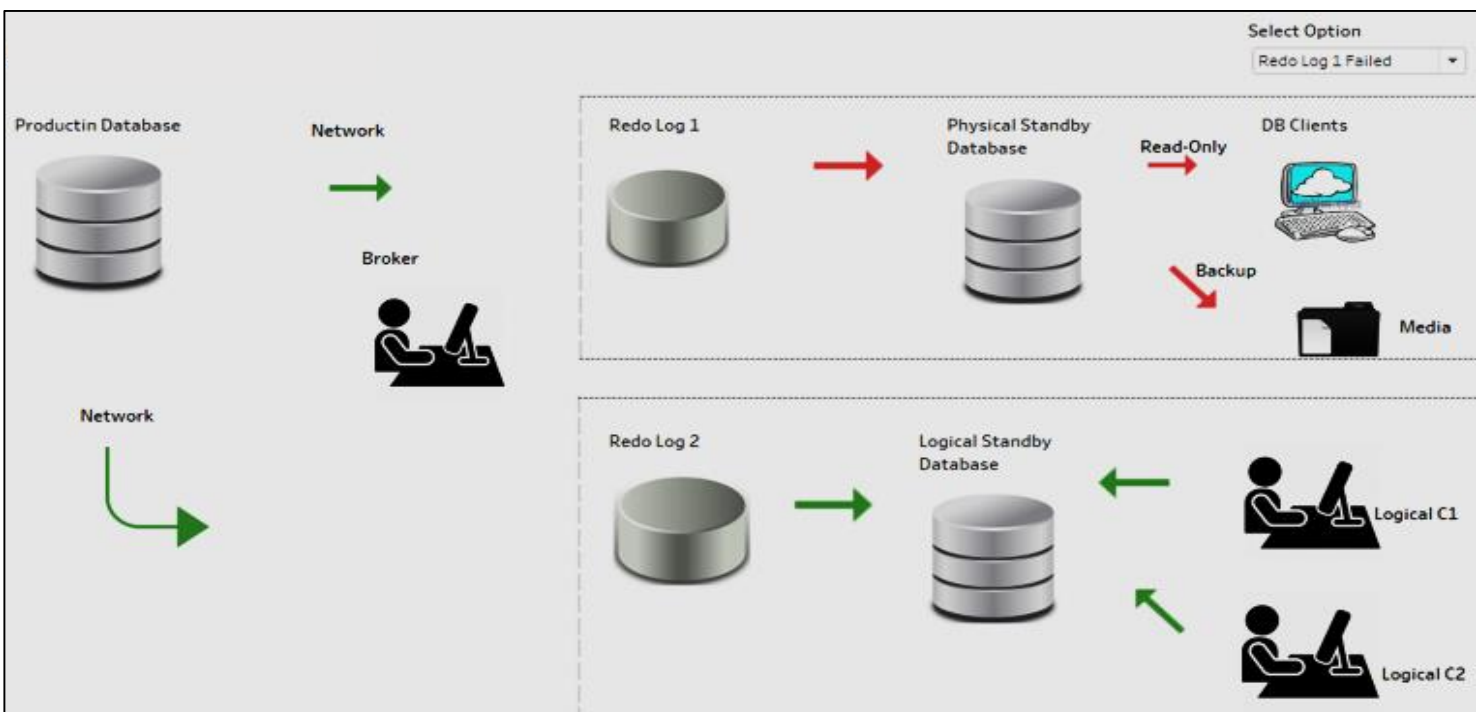

This Visualization helps in identifying the Bottleneck in the chain of processes.

Here, the visualization depicts the interconnection between the processes. If the Production Database works properly the whole process will work accordingly (depicted through green arrow) and will generate the output. If the Production Database fails to work, the whole process will fail (depicted through red arrow).

If a part of process gets failed, that particular process will be depicted through red arrows and rest will depicted through green arrows.

NODE LINK CHART

This type of visualization shows how things are interconnected through the use of nodes / vertices and link arrow to represent their connections and help illuminate the type of relationships between a group of entities
