

Hello!

**BIZ VIZ – Your visualization lookbook!**

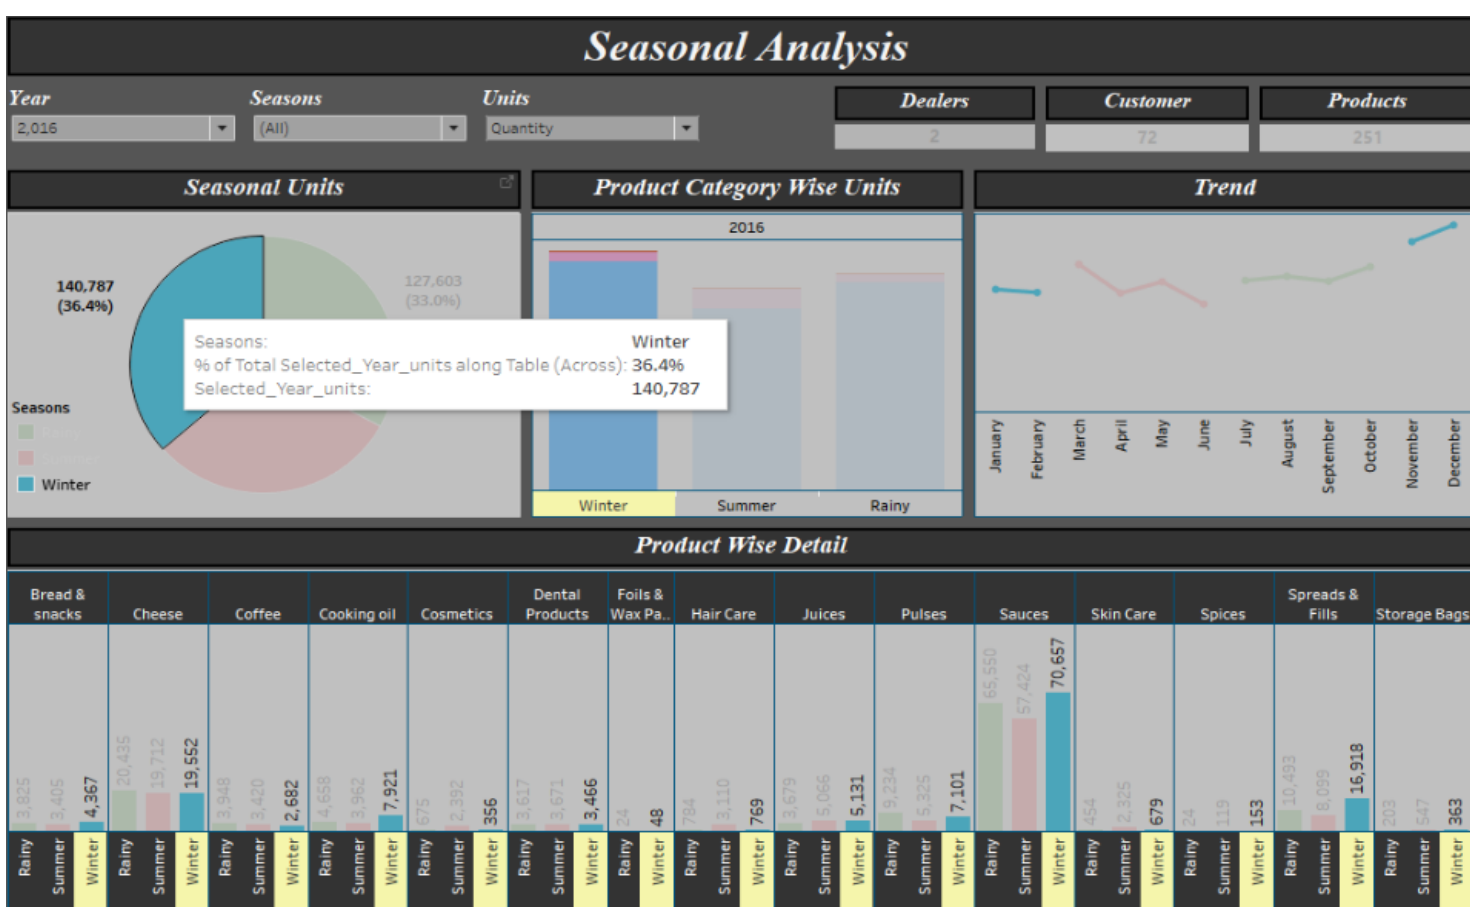

October 2017 – 1st Issue

This Visualization helps in identifying the number of quantity sold and the revenue generated over a period of time along with their seasonal trend.

Here, we have created a parameter for 'Units' which help the user to track the number of quantity been sold and the revenue earned.

Further hovering on the seasonal units, will highlight the sales trend and the product that has been sold on a particular season.

**BLENDED AXIS**

Blended axis is mainly used, when more than two measures are used in multi lines graphs or charts. Also, when there is a need to show two measures on the same axis, then Blended Axis is the option to explore. Blending measures uses the **Measure Names** and **Measure Values** fields, which are generated fields that contain all of the measure names in your data source and all of the measure values.
