

Tableau 2018.2

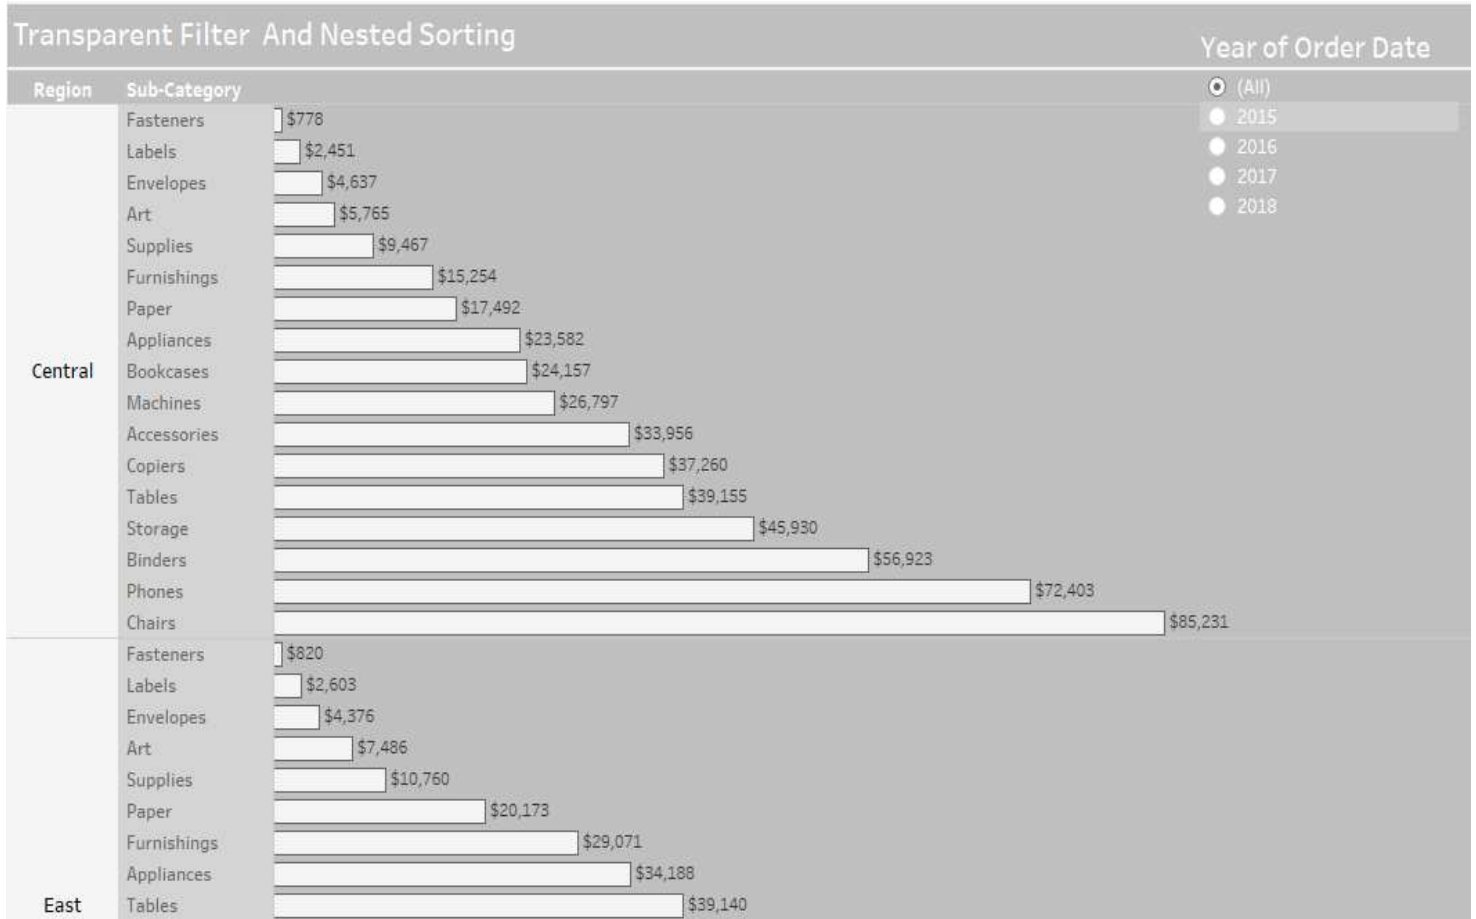

TABLEAU 2018.2

Tableau is expanding what's possible in Tableau in their newest release - Tableau 2018.2! This release brings major new functionality, whether you're an IT admin, analyst or developer.

- Use dashboard extensions to interact with data from other applications directly in Tableau.
- Join data source when the only common attribute is location, with spatial join.
- Nested sorting: Sort dimension values within the context of each pane for better top- or bottom-n analysis of your data.
- User can now make filters, highlighters, and parameters transparent, making it easy to have a consistent look across your entire dashboard.
- Tableau Services Manager provides an improved experience for administering Tableau Server for Windows and Linux via the browser.
